

XINGYAN AI

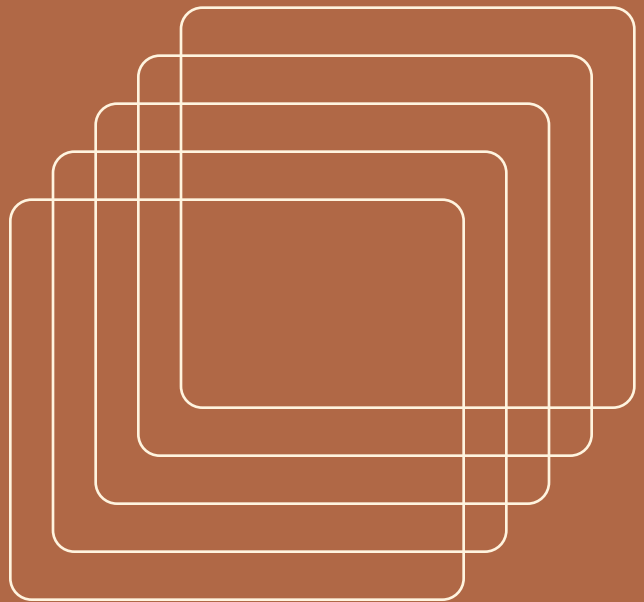

PUT IT INTO PRACTICE

Everyday AI Workflows

Practical AI workflows plus an illustrated short-drama project: script, shots, motion, sound and export.

READ. TRY. CHECK. REPEAT.

English PDF / 18 pages / Edition 1.1

BEFORE YOU BEGIN

A guide you can put to work.

Seven core lessons plus an eight-page illustrated project: Photorealistic AI short drama. Includes original examples, copyable prompts, exercises and checks. Written instructions only; no video course, software subscription or coaching.

Contents

- 03 Design the workflow before the prompt
- 04 Workflow 1: notes to action items
- 05 Workflow 2: source notes to an article
- 06 Workflow 3: compare options fairly
- 07 Workflow 4: draft a support reply
- 08 Workflow 5: turn a guide into a study plan
- 09 Measure and maintain the process
- 10 Practice worksheet and source notes
- 11 Make a short dramatic scene
- 12 Write a shootable micro-script
- 13 Create a cast and set reference
- 14 Plan the cuts with pictures
- 15 Prepare the three keyframes
- 16 Generate restrained performance
- 17 Edit picture, sound and captions
- 18 Run the final continuity check

Use and license

Read, try, check and keep a project log. One purchaser may use this guide and its prompts for personal learning and their own work. Embedded example images are for learning reference. Do not resell or publicly redistribute the guide or its illustrations. Third-party tools, fees and terms are separate. Results vary.

Design the workflow before the prompt

A workflow connects input, transformation, review and destination. The prompt is only one part. Start by defining the artifact and the person who will approve it. Keep actions such as sending messages or updating records separate from drafting. This guide uses fictional scenarios so you can practice without exposing customer or workplace data.

Try the process

1. Input: identify the source and who is allowed to share it.
2. Transformation: state what AI should produce.
3. Review: define the evidence and checks required.
4. Destination: record who approves any external action.

Prompt to adapt

Map a workflow for turning meeting notes into an internal update. Return Input, AI task, Human check, Final artifact and Approval owner. Do not assume permission to send the update. Mark unknown responsibilities as "to assign".

Practice

Why is "generate and email automatically" incomplete as a workflow specification?

Answer notes

It omits the permitted input, recipient verification, factual review, failure recovery and approval rule. Drafting a message is a different operation from sending it.

Make a short dramatic scene

Figure D1. AI-generated fictional adults in a cafe; not photographed actors.

Project: The unopened letter. Two adult siblings meet after rain. She offers a letter; he hesitates. Build a three-shot, 12-second scene that communicates this relationship through action and reaction. Begin with a silent scene or off-screen narration, then consider dialogue as a separate advanced task.

Script > Cast + set > Shot frames > Motion > Sound + cut

You will produce a script, three matching keyframes and a short edited film or labeled still animatic. The exercise uses no celebrity likeness or cloned voice.

The illustrations were generated with the built-in image generator for Xingyan AI. They are example outputs, not Adobe interface screenshots or tested Firefly video results. The original prompts are reproduced here. Adapted practice prompts may produce different results in another model. No finished video is supplied.
