

XINGYAN AI

WRITE BETTER BRIEFS

The Prompting Playbook

Prompting methods plus an illustrated AI anime project: story, consistent frames, motion prompts and editing.

READ. TRY. CHECK. REPEAT.

English PDF / 18 pages / Edition 1.1

BEFORE YOU BEGIN

A guide you can put to work.

Seven core lessons plus an eight-page illustrated project: AI anime and comic drama. Includes original examples, copyable prompts, exercises and checks. Written instructions only; no video course, software subscription or coaching.

Contents

- 03 Turn intent into an output contract
- 04 Make source boundaries explicit
- 05 Use examples to clarify a pattern
- 06 Break a difficult task into stages
- 07 Revise the failure, not the whole prompt
- 08 Create a small evaluation set
- 09 Build your reusable prompt card
- 10 Practice worksheet and source notes
- 11 Build a tiny anime story
- 12 Write beats before drawing frames
- 13 Lock a character and a master frame
- 14 Read the three-shot storyboard
- 15 Generate the individual shot images
- 16 Turn each frame into one motion
- 17 Assemble a 12-second scene
- 18 Review, repair and repeat

Use and license

Read, try, check and keep a project log. One purchaser may use this guide and its prompts for personal learning and their own work. Embedded example images are for learning reference. Do not resell or publicly redistribute the guide or its illustrations. Third-party tools, fees and terms are separate. Results vary.

Turn intent into an output contract

A prompt is easier to evaluate when it describes the shape and purpose of the answer. Start with the decision or artifact the output supports. A request such as "make this better" hides the criteria. Replace it with an audience, a transformation and a testable format. The examples in this guide are original teaching examples, not measured claims of model performance.

Try the process

1. Name the intended reader.
2. Specify the transformation: extract, summarize, compare, draft or classify.
3. Define required fields and limits.
4. State what the model must do when information is missing.

Prompt to adapt

Rewrite the supplied paragraph for a first-time customer. Preserve all factual claims. Return one version of 70-90 words and a bullet list of facts that need confirmation. Do not add testimonials, guarantees, discounts or certifications. If a sentence is ambiguous, flag it rather than resolving it by invention.

Practice

Improve this request: "Write a great product description."

Answer notes

A stronger brief names the product facts, audience, word count, included files, exclusions and tone. For example: "Write 120 words for a beginner buying an English PDF, using only these verified product facts, followed by Included and Not included lists."

Build a tiny anime story

Figure A1. Original AI-generated character and railway setting.

Project: A quiet farewell. An adult traveler arrives too late for a train, holds a letter, then decides to stay. Build a three-shot, 12-second silent or narrated scene. This small scope lets you test character consistency before making a longer episode.

Story > Character > 3 frames > 3 clips > Final edit

Deliverable: three separate approved frames, three short video clips if your account supports video generation, and a 12-second MP4. A still-image animatic is the fallback; it must be described as an animatic.

The illustrations were generated with the built-in image generator for Xingyan AI. They are example outputs, not Adobe interface screenshots or tested Firefly video results. The original prompts are reproduced here. Adapted practice prompts may produce different results in another model. No finished video is supplied.
